

# SuiteTwo Starter Kit

Powered  
by Intel

SuiteTwo, the Web 2.0 appliance powered by Intel, is the first enterprise-class product to harness the collective power of mass collaboration. SuiteTwo is a rich set of interconnected services that combine to improve productivity and enable high engagement marketing.

Web 2.0 applications have changed how people see the Web. The tools that individuals use in their personal lives are now making their way into the workplace--turning Web 2.0 into Enterprise 2.0. Just as email and IM are part of our online lives whether we're at home or at work, blogs, wikis, and RSS feeds continue to move into the business environment.

Comprised of software and services from best-of-breed Web 2.0 software companies, SuiteTwo enhances the value of dialogue inside and outside the corporate firewall. The integrated suite delivers wiki, blog, and RSS aggregation and syndication capabilities that together deliver more than any one individually. And the solution is administered, managed, maintained, and supported as one suite with common services such as search, single sign-on, user administration, and global navigation.

The SuiteTwo Starter Kit will help you welcome Web 2.0 to your business with confidence. The starter kit package includes the following:

#### Intel Xeon 2.66 GHz

- CPU 2 socket Dual Core
- 4 GB RAM (Minimum)
- 100 GB SCSI-based internal drive (minimum)
